SUMMARY

I'm Turki Alshaalan, an IT graduand from Imam Muhammad ibn Saud Islamic University. I enjoy building software across three areas: game development, artificial intelligence, and web development. I primarily work with Unity and C# for game development, use Blender for 3D assets, and build AI-powered and full-stack web applications that solve real-world problems.

What excites me most is creating software that's both technically solid and enjoyable to use. In game development, I focus on building gameplay systems, mechanics, enemy AI, and progression that make games feel fun and rewarding. In AI, I like exploring how modern machine learning and large language models can be used to build practical tools. For web development, I enjoy working across the entire stack, from designing responsive interfaces to building backend services, databases, and APIs.

I like taking an idea from a simple concept all the way to a finished product. Whether it's a game, an AI-powered application, or a full web platform, I enjoy turning ideas into something people can actually use. I've worked on projects both independently and in teams, and I enjoy combining technical problem-solving with creativity to build experiences that are smooth, reliable, and meaningful. I'm always looking for opportunities to learn, improve, and take on new challenges.

PROJECTS

DocuMind , Arabic document summarizer using local LLMs and text processing.

MasarFlow ,
AI platform that streamlines tasks through customizable workflows, automation, and intelligent agents.

Recipe Hub , Web app for managing and browsing recipes with an admin system.

Restaurant Ordering System , Java system simulating orders using core data structures.

SecureCheck , Privacy-focused tool for checking data breaches using APIs.

Smart Campus Services , Android app for campus services and local data storage.

Dungeon Puzzle , Puzzle dungeon crawler focused on traps and survival escape.

The Scary Library , Horror game where an AI hunts the player in a haunted library.

Knight With a Gun , Endless survival shooter with wave-based enemy combat.

The Hidden Kanz , Dungeon combat game with AI enemies, sword fighting, and magic.

Syntax Strike, GP project: 3D educational action game teaching Java through coding puzzles.

 EDUCATION

Imam Mohammad Ibn Saud Islamic University (IMSIU) [↗](#),
Information Technology - Bachelor's degree
Grade: 4.16

12/2022 – Present
Saudi Arabia, Riyadh

 SKILLS

- **Core:** Problem Solving | Team Problem Solving | Teamwork | Self-Learning | Collaboration | Project Management
- **Artificial Intelligence:** Artificial Intelligence (AI) | Generative AI | Large Language Models (LLMs) | Vibe Coding
- **Programming & Web Development:** C# | Python | Flask | Java | JavaScript | HTML | CSS | PHP | XAMPP | phpMyAdmin | SQLite | MySQL
- **Technical & Conceptual:** Software Development | Web Development | Web Design | Software Architecture | Human-Computer Interaction | Programming Languages | MVC
- **Game Development:** Game Programming | Game Design | Game Development | Game Mechanics | Game AI | Unity
- **3D & Visual Creation:** Blender | 3D Modeling | 3D Rendering

 CERTIFICATES

- McKinsey.org Forward Program [↗](#)
- Complete C# Unity Game Developer 3D (Updated To Unity 6) [↗](#)
- Game Design and Development [↗](#)
- 3D Game Developer Bootcamp [↗](#)
- Introduction to Blender [↗](#)
- Unity Essentials Unity [↗](#)
- Jobs in game development [↗](#)
- Game design and development with Unity and generative AI tools [↗](#)
- Game design: between imagination and reality [↗](#)

 ACHIEVEMENTS

1st Place Winner - PwC Middle East Hackathon [↗](#), PwC Middle East

07/02/2026

1st Place Winner - Enjaz Game Jam, Enjaz Club

19/11/2024

 LANGUAGES

Arabic — Native/Bilingual

English — Fluent
